Every Good Garden Begins with Good Seed—Plant Perry's

PERRY'S SELECTION OF UP-TO-DATE "EASY TO GROW" VEGETABLES ALL WORTHY OF A PLACE IN YOUR 1944 Victory Garden

GREENPODDED BEAN, STREAMLINER

A new, white-seeded, dwarf, green-podded Bean. The 7- to 9-inch medium green pods are flat, very tender and entirely stringless at all stages of growth. Possessed of a fine flavor this variety is especially valuable for the home garden.

Pkt. 15c., lb. 50c., 2 lbs. 95c., 7½ lbs. \$3.40

BET, CROSBY'S IMPROVED EGYPTIAN PERRY'S SPECIAL STRAIN

Where a first early sort is desired, this variety is unequaled. The medium-sized roots, so eagerly sought for, are decidedly attractive in appearance; smooth, free from rootlets, a rich dark red in color, and uniformly round. The flesh is a deep blood-red with slightly lighter zonings, and in texture, crisp and free from any tough fiber. When cooked, it is sweet and tender. Our stock of this superior strain is selected with the greatest care as to color, shape and earliness.

Pkt. 15c., oz. 45c., ¼ lb. \$1.25, lb. \$3.75

BROCCOLI, ITALIAN SPROUTING

A tremendously popular and appetizing vegetable. The plants attain a height of from 2½ to 3 feet. A large central head is first produced on the main stock and after being cut a number of new sprouts appear developing into smaller heads. It thrives almost anywhere. For an early crop sow the seed in a hotbed and transplant to the open ground. For a later crop, seed may be planted in the open ground.

Pkt. 25c., ½ oz. 75c., oz. \$1.25

CARROT, IMPERATOR

An unusually fine variety of high quality that has won favor with all who have grown it; 7 to 8 inches in length and uniformly tapered to a semi-blunt end. Smooth, rich orange in color with an indistinct core; fine grained and tender. Splendid for home gardens where it prefers a deep sandy loam.

Pkt. 15c., oz. 60c., ¼ lb. \$1.75

HYBRID SWEET CORN

The greatest improvement in Sweet Corn in recent years is the development of these hybrids that outyield all others and are also resistant to Stewart's disease. We highly recommend the following varieties as being especially good but call your attention to our complete selection of varieties on page 7.

EARLIGOLD

One of the earliest hybrids, maturing in about 73 days, an important factor where the season is short. 6½-inch ears with 12 to 16 rows of medium yellow kernels. Of excellent quality and a splendid variety for canning.

Pkt. 25c., lb. 65c., 2 lbs. \$1.25, 6 lbs. \$3.50

LINCOLN

All America Bronze Medal Winner for 1941

A medium early variety. The ears measure 7 to 7½ inches in length with 12 to 16 rows of golden yellow kernels of good quality. Fine for a main crop.

Pkt. 25c., lb. 65c., 2 lbs. \$1.25, 6 lbs. \$3.50

MIDGET CORN

An excellent type for small gardens. The plants grow 2½ to 3 feet in height and produce ears 3 to 4 inches in length. The flavor is delicious and a rare treat is in store for those who have never tried it. Be sure to include this worthwhile novelty in your order. We know you will be pleased as we have had so many excellent reports from our customers who have grown it.

Perry's Midget White.....Pkt. 25c.

Perry's Midget Yellow.....Pkt. 35c.

CUCUMBER, PERRY'S NONPAREIL

A splendid, dark green Cucumber that has no equal for growing under glass and has proven superior as an outdoor variety. The dark green color, symmetrical shape and small seed cavity are outstanding characteristics of the 9 to 11 inch fruits. The flesh is tender, crisp and of fine flavor. Very productive.

Pkt. 25c., ½ oz. 60c., oz. \$1.00, ¼ lb. \$3.50, lb. \$12.00

Perry's Midget Corn Is Ideal for the Home Garden

For limited garden spaces we recommend dwarf varieties like Golden Bantam Corn

SWEET CORN

Postpaid at pound prices. For larger quantities by Parcel Post, add postage

Culture—Plant about May 15th and in succession every two weeks up to July 14th. Drop six kernels to a hill. Let the hills be 3 feet apart each way for dwarf sorts and slightly more for tall varieties. Sometimes Corn is sown in rows 3 feet apart, allowing 10 inches between the individual plants. Three or more rows should be planted, however, either way in order to secure cross fertilization.

New Hybrid Varieties

The greatest improvement in Sweet Corn in recent years is the development of these hybrids that outyield all others and are also resistant to Stewart's disease. We caution our customers against saving their own seed for planting as Hybrid Corn will not give best results unless carefully crossed each year by experts.

FRANKLIN PARK LAWN SEED

TRADE MARK REGISTERED

The Best Mixture for Sunny Lawns

Recognized as a quality mixture for those who want the best. We blend it ourselves fresh every season from heavy, re-cleaned, live seeds of those grasses known to be adapted to most all of our soils and climate. A small amount of White Dutch Clover is included. It is free from worthless chaff and dirt. It is high in germination, as tests will prove, and complies with the Massachusetts seed law. **Franklin Park** is used extensively on lawns of fine homes and large estates, in parks and cemeteries all over New England. Under ordinary conditions, 1 lb. (1 qt.) is sufficient to properly seed 250 to 350 square feet.

PERRY'S SHADY SPOT LAWN SEED

There's no better mixture for sowing on the north side of buildings, between houses or under shade trees receiving sunshine less than half the day

Our **Shady Spot Lawn Seed** is blended from the best grasses possible to obtain for this purpose, only those that grow and flourish under shady conditions in their natural and wild state being used. It is always advisable for those who are seeding down shady places to supply new soil, if possible, especially if large trees are producing the shade, as their roots spread so fast as to quickly exhaust its nourishment. Liberal amounts of fertilizer are as necessary for lawns under shade trees as are plenty of seed and water. Trimming to allow more air and light is frequently helpful.

Sow 1 lb. of our Bank and Terrace Mixture to each 250 to 300 square feet and rake again lightly and firm with a roller or the back of a spade. On steep slopes it may be well to sow a quart of seed oats to each 2 lbs. of seed to help temporarily to retain the surface.

PERRY'S SEASHORE LAWN GRASS MIXTURE

Many a lawn along the New England Shore has been grown from this mixture

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of 4 inches should be broadcasted, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 square feet.

Lb. 75c., 5 lbs. \$3.65, 10 lbs. \$7.25, 25 lbs. \$17.50

We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

SOW WINTER RYE AS A COVER CROP

There are hundreds of gardens that can be benefited by a Fall planting of Winter Rye. Sown at the rate of 5 lbs. to a space 40 by 40, raked in and allowed to grow until April, Winter Rye will produce an abundance of roots and foliage that will not only restore fertility to soils but improve them by adding a lot of desirable humus. It is a logical and sensible thing to do because the cost is slight and the gain great. If for no other reason than to keep down a growth of weeds after your vegetables have been harvested, Fall planting of Rye even as late as November would be a logical procedure.

INOCULATION FOR LEGUMES

It is a proven, scientific fact that all legumes thrive only when certain bacteria are present in the soil. Some soils may be entirely without them—these Nitrogen-gatherers. Under such conditions one may fail to get a good "catch" from seed planted. Inoculation of seed with bacteria before planting is, therefore, a sound investment and safe insurance. The cost is slight. We sell the jelly form Legume Aid with instructions for use in every package.

DWARF BEDDING PETUNIA, CHEERFUL

Bronze Medal Winner, All-America Selections for 1944

5346 A brand new color and growing habit distinguishes the new single Petunia "Cheerful." The name is acquired from the crisp, satiny sheen of its salmon-pink flowers. At first the growth is low, spreading close to the ground; later the plants form a mound 10 to 12 in. high with a spread of 2 ft. Growth is densely compact with no tendency whatever to thin out, fall over, or to spread open in the center; a valuable and distinctive characteristic. The clear salmon-pink flowers have a deeper rose veining toward the throat and here and there among the mass of blooms are ones a tint or two lighter than others. Studded, from early Summer until frost with flowers 2½ in. and more across, Petunia "Cheerful" makes a place for itself in garden beds and borders wherever a delightful color is wanted. Other flowers in pastel tints of every conceivable hue may be combined with plantings of this Petunia. Pkt. 25c.

Petunia, Cheerful

CORAL FLOWER

2263 A new annual plant bearing great panicles of small rosy pink, star-like flowers on long, wiry stems, 24-30 in. in length rising from thick, dark green foliage at the base of the plant. Following the flowers come jewel-like seed capsules resembling beads of brightly polished coral. Easily grown in full sun blooming from mid-June until late October. Splendid for bedding purposes and as a cut flower. Sow in late Spring when the soil is warm. Pkt. 25c.

Marigold, Mammoth Mum

MARIGOLD, MAMMOTH MUM

Honorable Mention, All-America Selections for 1944

4088 The new Mammoth Mum is a Chrysanthemum-flowered Marigold. Early to flower in 2½ months from seed, it affords the gardener an opportunity to have "Mums" for garden and cut-flower display months before frost even threatens. Size of bloom is an additional distinctive characteristic. Flowers 3½ in. and more across and 2 in. deep make it the largest Chrysanthemum-flowered Marigold. The fluffy, ball-like light sulphur-yellow blooms made up of many finely cut individual florets intricately interwoven in true Mum form are borne profusely on upright plants 30 in. tall. Flower stems are extremely long and sturdy, making them easy to handle in arranging. Frequently, a single stalk may be cut with ample long-stemmed flowers to make a substantial bouquet. In the garden, the plants may be used in strong accent masses along the border and in solid beds. Pkt. 25c.

THE BABY SALVIA

6420 A new and really delightful Mexican variety of great merit and well named The Baby Salvia. The buds are subtended by white bracts that drop as the flowers open. The blossoms are a charming shade of coral-rose with a carmine suffusion. The dwarf, compact plants attain a height of only 16 in. with dense, dark, emerald green foliage growing close to the stem and are uniform both as to height and width. The white-bracted buds, carmine-toned blooms and dark green foliage combine to make most attractive plants that will bloom from the middle of July until late Autumn. Require no special treatment other than that given ordinary annuals. Pkt. 25c.

SALVIA FARINACEA, ROYAL BLUE

6434 A greatly improved selection of this popular type of Salvia and a shade deeper than the well-known Blue Bedder. The long, graceful, 3-foot spikes of dark blue flowers and powdery gray foliage make an ideal background for other flowers in the border. Used as a cut flower it blends perfectly with many floral arrangements. Pkt. 25c.

SOUTHERN STAR

6590 A novel and interesting plant from the Argentine bearing upfacing sprays of bright sky blue flowers. The unusual coloring appears as if painted on. Whole constellations of 5-petaled, star-shaped flowers are open at once, giving a most delightful effect. The plants grow to a height of 15 in., then arch over as the upfacing flower sprays appear early in June, continuing until the middle of October. The seed germinates quickly and the young plants transplant easily in the open ground where the plants bloom freely in Summer heat. Pkt. 25c.

Bronze Medal, 1943

5326 An outstanding new dwarf Petunia with medium sized pure white flowers with a slight yellow shading in the throat. Each plant is a perfect mound 8 to 10 inches high, reminding one of the Eskimo igloo and is covered with a wealth of bloom throughout the entire Summer. The fact that the plants remain so dwarf and compact (provided the soil is not too rich) makes it ideal for borders. Pkt. 20c.

RUDBECKIA, STARLIGHT

Honorable Mention, 1942

6249 Strong growing, branching annual plants, 3 ft. tall, producing quantities of double and semi-double flowers on long stems, ranging in color from primrose yellow to mahogany and bicolors with dark centers. Splendid for cutting and floral arrangements. See colored illustration facing page 26. Pkt. 25c.

SNAPDRAGON, RUST-RESISTANT, REVEILLE

VERBENA, ANNAPOLIS BLUE

8184 Blue shades from light to dark blue are found on a single blossom which blend beautifully to make a deep Belladonna blue. Its habit is spreading and the large trusses of flowers stand semi-erect on 15 in. stems. Pkt. 15c.

VERBENA, ROSEGLOW

8214 Glowing deep rose shading to orange scarlet on the same bloom. The individual florets are without an eye. The color is so luminous that each plant has the appearance of a fountain of fire. Pkt. 15c.

VERBENA, SPITFIRE

8217 A new variety that is the personification of a "Spitfire" in action. Vivid scarlet rose flowers showing only the trace of an eye are carried on 15-in. stems. The plants have a vigorous habit of growth measuring 25 to 30 in. in diameter. An outstanding variety that can be used for either bedding or cutting. Pkt. 15c.

PERRY'S PRIZE ASTERS

WILT-RESISTANT STRAINS. Wilt most commonly occurs in the hot Midsummer months just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The remedy is to use Wilt-resistant Strains that have proven so valuable that wherever available we offer them to the exclusion of others. Plants grown from Wilt-resistant Strains are not immune to the disease known as Aster "yellows," which is quite different and is transmitted by insects. However, they are not so susceptible to infection from it as they have a sturdier constitution. Varieties marked with asterisk (*) are Wilt-resistant.

FOR THE CONTROL OF THRIPS

Before planting we suggest mixing 2½ oz. of Semesan in 1 gal. of water and allow the bulbs to soak in this solution for 7 hours.

When the plants have attained a height of 6 in. the U. S. Dept. of Agriculture recommends weekly spraying with the following mixture. ¼ lb. Tartar Emetic, 1 lb. brown sugar, 6 gal. water.

After the bulbs have been lifted in the fall and the tops cut off, put them in boxes and dust with Naphthalene Flakes, using 1 oz. to 100 bulbs. Cover the boxes with paper and leave them for 4 weeks. Do not use boxes with tight fitting covers as ventilation is important.

At the end of 4 weeks remove the Naphthalene Flakes and store the bulbs as usual.

PLANT STARTER

A self watering cypress seed flat one foot square elevated in such a manner that a pan of water can be placed beneath it. Moisture is conveyed to the flat by means of a fiber glass wick, one end being placed in the water and the other passed through a hole in the bottom of the flat. A steady supply of water passing up through the wick assures an even supply of moisture at all times. The starter has one removable side making it easy to remove seedlings or rooted cuttings when ready to transplant. Prevents overwatering, damping off, drying out, and shock to seedlings from cold water.

Plant starter equipped with fiber glass wick. \$1.25.

PLANT WICK

The most practical and efficient method of watering. For starting seedlings, rooted cuttings and for potted plants. Plant Wick is made of pure Fiberglass and as it is absolutely inorganic, carries no disease, does not rot in the soil and can be sterilized easily and quickly.

Easily moved without shutting off water or getting wet. The soil is soaked deeply and thoroughly, covering an area on all sides of Soil-Soaker. Far more beneficial than light surface-sprinkling. Puts the moisture down into the soil.

CARBOLA

Carbola is primarily a powerful disinfectant that kills certain germs by contact which cannot be seen by the naked eye. This germ killer is combined with a snow-white pigment, same as used in all best oil paints. Thus, when Carbola is applied, it kills invisible germs by contact and dries white all in one easy operation. It can be sprayed or brushed on.

Carbola comes in powder form to which only cold water is needed to make a paint.

Carbola powder, just as it comes in the handy, clean packages, also makes an ideal dry disinfectant. The dry dusting method of disinfecting is considered very practical, especially for floors, dropping boards, nests in poultry houses, etc. where moisture is to be avoided.

Carbola comes in powder form, ready to use. Just mix with any water and apply with brush or spray. Will not clog sprayer.

One pound covers 100 square feet. Will not blister, flake or peel off if used as directed. 5 lbs. 60c., 10 lbs. \$1.00, 25 lbs. \$1.90

DON'T WASTE GARDEN RUBBISH—CONSERVE IT BY USING ADCO

Garden wastes, including leaves and grass clippings are too valuable to burn or otherwise destroy. Convert them easily into rich, organic manure by employing ADCO, a powder which when mixed with vegetable waste and kept moist gradually converts the material into real manure free from weed seeds. The method of using ADCO is simple. Anybody can use it. Spread your farm and garden rubbish (either in a heap on top of the ground, in a large crate, or in a shallow pit) and every time it becomes 6 inches higher, wet it down, sprinkle with ADCO, and tramp or tamp it down. Repeat these steps until all the rubbish is used, and at least once, at the end of a month, turn it over. In three months or so you will be rewarded with a fine lot of rich, clean, organic fertilizer. 7½ lbs. \$1.00; 25 lbs., sufficient to reduce 10 wheelbarrows of material, \$2.25; 150 lbs. \$10.50.

DAFFODILS FOR NATURALIZING Special Mixture

A glorious mixture of hardy "Daffodils," for planting in the woodland or meadow, in scattered, irregular groups in the shrubbery border or in some sheltered nook. Avoid places where water is likely to stand during the Winter, otherwise almost any soil or situation will be satisfactory. Planted this way it will be best to leave the bulbs undisturbed for several years.

The mixture contains many handsome varieties and just about all the desirable types. Being blended from so many different types and varieties there will be a considerable difference in the size of the bulbs but each will be of good blooming quality.

HINTS ON LAWN PREPARATION AND IMPROVEMENT

Probably we receive more requests each season for help in lawn making and improvement than on any other subject connected with gardening, so we print the following information in hopes that it will answer many of them, though we recognize that practically every lawn presents an individual problem.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always uphill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June bugs and Japanese Beetles, dig in also 8 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like Bonemeal or 6-8-2 to each 1000 square feet, especially under trees.

When sowing your seed, be sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas). Roll, if not sticky, with a water

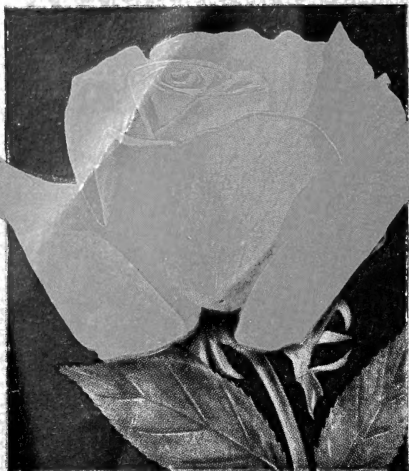

weight roller to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer. We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high.

The right kind of a lawn is luxuriant and thick and practically free from weeds. Where do weeds in the lawn come from? Only properly sterilized soil is entirely free from weed seeds. Some may come with top-soil brought in, or from composts not thoroughly rotted, others are carried by the wind and birds, but more are sown each year in impure lawn seed. To secure a maximum of good seed we urge you to buy only Perry's high grade lawn mixtures. But when weeds do appear, dig them out promptly. Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of Lawn Seed on hand for this purpose.

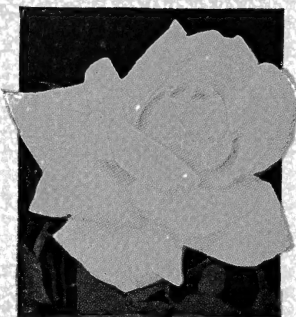

The first work in the Spring on established lawns is the removal of all litter that has collected during the Winter. With the lawn clean, fill in all hollows with good top soil, and scatter fresh lawn seed and fertilize as for new lawns. Then while the ground is still soft, roll with a water-weight roller—one that can quickly be made heavy or light, at will, to meet conditions. The earlier this work can be done, the better. A rolled lawn will be smoother and have a neater appearance, though repeated rollings may be injurious.

For additional help we recommend "LAWNS", Charles W. Parker—the best book on the subject—\$1.25 postpaid
